I just loved the book. -- ByAmazon Customer on June 6, 2017 This is a very good inspirational book. This version includes commentary that adds more examples to today. This will certainly change, consider things are, and powerful things on it, when they are mixed with certainty of purpose, perseverance, and a burning desire for wealth, or their translation into other material objects. A little more than thirty years ago, Edwin C. Barnes discovered how true that men really feel and grow rich. His discovery didn't come about on a sitting. It came up a little bit, beginning with a burning desire of the great Edison to become a business associate. One of the main features of Barnes' will was that it was certain. He wanted to work with Edison, not for him. Carefully, describe how he went about translating his will into reality, and you will have a better understanding of thirteen principles that lead to wealth. When this desire, or impulse of thought, first flashed in his mind he wasn't in a position to act on it. There were two difficulties in his way. He didn't know Mr. Edison, and he didn't have enough money to pay his railroad hire for Orange, New Jersey. These difficulties were enough to discourage the majority of men from making any effort to fulfill the will. But he had no ordinary desire! He was then determined to find a way to carry out his wish that he finally decided to travel by blind stuff, rather than defeat. (To the uninitiated, this means he went to East Orange on a freight train). He presented himself to Mr. Edison's lab, and announced that he came to go into business with the inventor. Talking about the first meeting between Barnes and Edison years later, Mr. Edison said, He stood there in front of me, looking like a simple maverick, but there was something in his facial expression that gave the impression that he was determined to get what came later. I had learned from years of experience with men, that when a man really desires one thing so deeply that he's ready to stake his entire future at a turn of the wheel to get it, he's sure to win. I gave him the chance he asked for, because I saw he had made up his mind until he succeeded to stand by. Subsequent incidents proved that no mistakes were made. Just what young Barnes told Mr Edison on that occasion was that he was far less important than what he thought. Addison, herself, said so! this The presence of the young man who made him his start in Edison's office, for that was certainly against him. It was what he thought counted. If the importance of this statement can be conveyed to everyone who reads it, there will be no need for the remainder of this book. Barnes did not share his partnership with Addison on his first interview. He got a chance to work in Edison's offices, on a very nominal wage, doing things that were insignificant for Edison, but most important for Barnes, because it gave him an opportunity to display his wares where his intended partner could see it. Months passed. Apparently nothing happened to bring the iconic goal which Barnes had set in his mind as his decidedly dominant objective. But something important was happening in Barnes' mind. He was constantly intensifying his desire to become a business associate of Addison. Psychologists have rightly said that when one is really ready for one thing, it puts in its presence. Barnes was ready for a trade union with Edison, moreover, he was prepared to stay until he determined that's who he was seeking. He did not say to himself, ah, well, what is the use of it? I think I will change my mind and try for a seller's job. But, he said, I came here to go into business with Addison, and I'll meet this end if it takes the remainder of my life. He meant it! What a different story would tell men is that only they would adopt a certain purpose, and stand with that purpose until it was time to become an all-consuming obsession! Perhaps the young Barnes didn't know it at the time, but his bulldog determination, his persistence in standing back of the same desire, was destined to mow down all opposition, and bring him the opportunity he was seeking. When the occasion came it appeared in a different form, and expected from a different direction than Barnes expected. This is one of the tricks of the occasion. It has a sappy habit of slipping through the back door, and often it comes disguised as bad luck, or temporary defeat. Perhaps that is why so many fail to recognize the opportunity. Mr. Edison had just perfected a new office device, known at that time, as Edison dictating machine (now Ediphone). His salesmen were not enthusiastic about the machine. They did not believe that it could be sold without a big effort. Barnes saw his chance. It was quietly crawled in, hidden in a gay-looking machine which no one but Barnes and the inventor interested.
